SUMMARY

Customer Support Engineer II with 2.5+ years of experience providing technical support for **production SaaS applications** and troubleshooting complex customer issues. Experienced in diagnosing frontend, integration, and data-related problems using JavaScript, browser developer tools, HTML/CSS, JSON, and application data. Skilled at reproducing issues, identifying root causes, communicating technical solutions to customers, and **collaborating with engineering teams** to resolve product defects. Full-stack development experience with React, Node.js, Express, MongoDB, and **third-party API integrations**.

EXPERIENCE

Rebuy – Customer Support Engineer II (Current Role)

- Provide technical support directly to customers through Intercom, troubleshooting production issues across Rebuy, Shopify storefronts, integrations, and third-party applications
- Investigate and reproduce customer issues by analyzing browser console errors, network requests and responses, HTML/CSS, JavaScript behavior, Shopify functionality, and application data to identify root causes
- Develop custom JavaScript, CSS, and HTML solutions when appropriate to resolve customer-specific functionality and presentation issues
- Collaborate with engineering teams to escalate complex bugs and product issues, providing reproduction steps, screenshots, Loom recordings, and technical findings to accelerate investigation and resolution
- Resolved approximately 4,700 customer support cases since joining Rebuy, with a typical first-response time of 2-3 minutes
- Maintained a 97% positive CSAT rating across 77 customer responses while resolving 1,100+ support cases so far in 2026

US Army - Explosive Ordnance Disposal (EOD) Team Leader

- Led a 3-person team responsible for technical EOD operations while maintaining strict procedural and safety standards
- Trained and prepared 40+ personnel in technical procedures, safety protocols, and operational standards
- Produced detailed operational documentation and reports to support coordination, analysis, and decision-making

SKILLS

- **Frontend:** React, JavaScript, HTML, CSS, Tailwind
- **Backend / APIs:** Node.js, Express.js, REST APIs
- **Database:** MongoDB
- **API / Data:** JSON, API Integration, Postman
- **Tools / Deployment:** Git, GitHub, Render, CI/CD
- **Other:** Browser Developer Tools, Troubleshooting

PROJECT - ExitWx (Full Stack Weather App)

Built and deployed a full-stack weather application using the **MERN stack** for skydivers and dropzone operators.

- Integrated and normalized data from multiple third-party APIs for weather, geocoding, and marine conditions through a custom backend API
- Designed REST API endpoints and MongoDB models for users, locations, and user-specific favorites
- Implemented authentication, request validation, debounced location autocomplete, and persistent user data
- Deployed frontend and backend services separately on Render using environment-based configuration

EDUCATION

- **V School - Full-Stack JavaScript Web Development Certificate**
- **Utah Valley University - Personal Financial Planning (B.S.)**
